Bristol-Burlington Health District Brings Public Internet Access to Septic System and Private Water Supply Records

On August 8, 2017, staff of Bristol-Burlington (Connecticut) Health District (BBHD) began scanning septic system and private well water records into a land records management system operated by Cott Systems, Inc. on the Health District's behalf. The records are being scanned in at the Health District for storage and indexing on Cott's computer system. Each record is filed by Town, Street and House Number, and is immediately available on the Internet via a browser software at a common address (URL): <http://cotthosting.com/ctbbhdexternal> .

When the web page at cotthosting.com is displayed, there is a short explanation of how to find records. The address can be entered as: TOWN <space>Street Address<space>Number. Expanded searches are available by inputting a question mark at the end of Town or street, such as BURLINGTON ANGELA'S?

Scanning of records is expected to take as much as a year to complete for both the Town of Burlington and the City of Bristol. As new systems and wells are approved, those records will be scanned immediately. In the interim, until all the current records are scanned, they continue to be available at BBHD during office hours.

Cott Systems, Inc., with headquarters in Ohio, is a Land and Court Records Management provider. They are known for providing land records management for the majority of Connecticut's Town and City Clerks, and vital records for the City of Middletown as well.
